

Ostroleka Biomass Boiler House

Because of the building height, safety measures had to be taken into special consideration already at the planning stage. All working platforms had to be temporarily secured with railings and all openings covered with thick wooden plates. Around 1 km of railings was used in total.

- > Customer: Metso

Large and complex structures for a 55 m tall boiler house. In total, Ruukki manufactured 1,300 tones of **steel structures**.

Because of the building height, safety measures had to be taken into special consideration already at the planning stage. All working platforms had to be temporarily secured with railings and all openings covered with thick wooden plates. Around 1 km of railings was used in total.

Time schedules for manufacturing and installation were exceptionally tight.

Metso valued our advanced Health-Safety-Environment management: regular meetings concerning safety issues and detailed work planning and coordination significantly contributed to work safety.
