

## Thermal Power Plant

Sysav is a company that operates in the waste processing of nine Scanian municipalities. The combustion capacity of their large Malmö plant is at 25 tons per hour throughout the year. The plant produces heat and electricity for those living in the Malmö area. Ruukki worked in close cooperation with the contractor, and the proposed solutions led to a satisfying end result for all parties involved. The plant received the 2003 City of Malmö construction award for best new construction.
