EPD in question

EPD number	RTS_49_20
Validity	From 29.4.2020 to 30.3.2025
Requested extension period	From 1.4.2025 to 1.10.2025
Estimated submission for updated EPD	1.10.2025

Situation leading to the request

[Explain the reason you want to extend the validity of the EPD.](#)

We are in the process of making a new EPD to replace the expiring one. We are, however, facing delays in the EPD update project e.g. because our main raw material supplier is currently updating their expired EPD (approved for extension until 09/2025) and the updated EPD will be published during the next half year. We will utilize the updated raw material EPD in our EPD update.

We don't expect huge changes in the blast furnace based steel EPD values, since the production process is the same as five years ago. From the result perspective there should not be problems to continue with the current EPD some months more.

We are going to publish the updated EPD via EPD Hub.

Compliance

By signing this document, I confirm on behalf of my organization that all relevant instructions, regulations and guidelines will be followed during the extension of the validity and that the updated EPD shall be verified and submitted for publishing in the above schedule.

Mira Laukkanen
