Cor-Ten®

Rheinzink

Aluminium composite

Colour-coated Aluminium Powder painted aluminum Raw Aluminum Anodized Aluminum

Copper, brass and bronze

Glass

Colour-coated steel

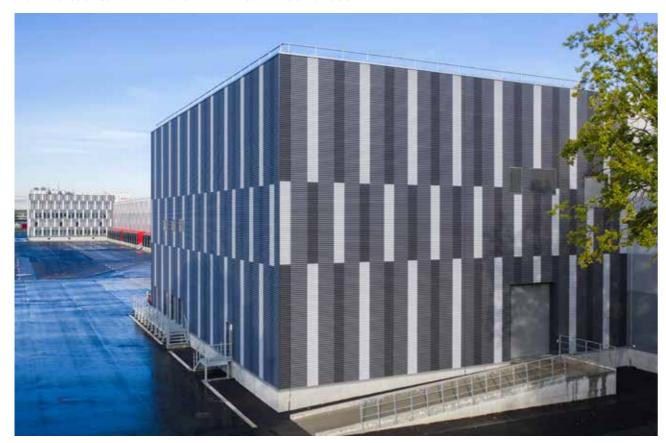

Colour-coated metal facade products are our most requested products, thanks to a vast product assortment, high durability and sustainability it is simply an excellent choice with good value for money. GreenCoat Hiarc is a zinc-coated steel painted on both sides in carefully monitored factory conditions. Powder painting is an option, if for example we do not have the colour of choice in our standard colorcoating chart. We may then offer a wide range of RAL colours, even for relatively small facade areas.

FACADE PRODUCTS: RUUKKI LIBERTA® 102 GRANDE AND RUUKKI® DESIGN TOKYO S18.

Stainless steel

We offer products made of stainless steel or acid resistant stainless steel, in a variety of alloys. Our extended assortment contains also products made of our coated acid resistant stainless steel, for example to the offshore industry. Acid resistant stainless steel, in the correct alloy for the purpose & environmental conditions, maintains its shine and appearance very well and, as a solid material It is very easy to maintain. They are available in a variety of surface finishes that give them different levels of reflectivity and different textures. Stainless steels can, except be coated also, colored by vaporizing a titanium alloy on the surface.

Cor-Ten®

Cor–Ten® is US–Steel own brand for the patented steel developed in the 1930's. Our mother company, SSAB, produce Cor–Ten® under a European License. In the end of the production sequence of the Cor–Ten® steel, a water based protective layer is applied to the steel surface. The layer prevents oxidation during transport and temporary storing. When exposed the temporary water based protective layer dissolves naturally, if it hasn't already been wiped or washed off when the product was installed. The oxidation process of the steel surface starts shortly after the product are exposed, and when an even, smooth and natural layer has developed it will prevent further oxygen reaching the steel core. In other words, the oxidized layer are a protective layer of the steel itself, preventing further oxidation. This is one of the unique features of Cor–Ten®. When used correctly Cor–Ten® is an expressive, long–lasting and maintenance–free material. All of Ruukki's available Cor–Ten® products are designed and tested to perform reliably. They age continuously in a beautiful, safe and controlled way.

Aluminium composite

Aluminum composite products offer a rigid product with excellent surface flatness, which enables big individual product sizes. The aluminum composite Material consists of two aluminum facings bonded to a core. The core material is either, aluminum honeycomb or a solid core made of mixture of minerals and polymers. The exterior layer of the aluminum composite, is either color-coated in PVDF or HQPE coating, on top of a primer. The color chart is vast, with both metallic and solid colors.

24 2:

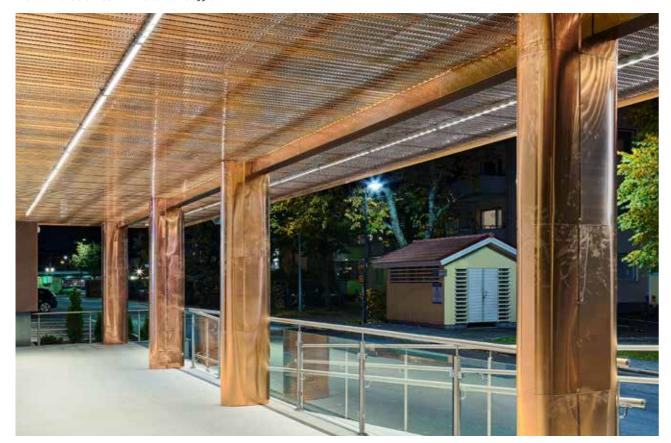

Copper, brass & bronze

Patina forming on the wall and various pre-patina options give these solid metals a live, genuine surface for very long time spans. Copper can be pre-patinated to a variety of colours. Greenish pre-patinated colours change less than others over the years. The colour of naturally formed patina for copper, brass and bronze depends on environmental conditions, typically resulting in a dark brownish matt surface. Each alloy will attain a different hue. Nordic Royal is alloyed with aluminum and retains its "golden" colour.

Design tools

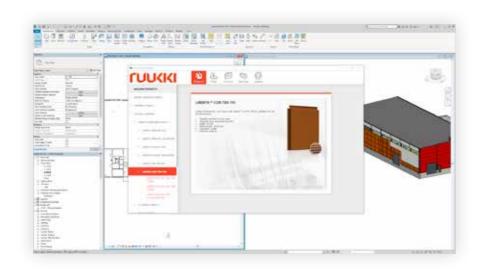

Go to: www.ruukki.no

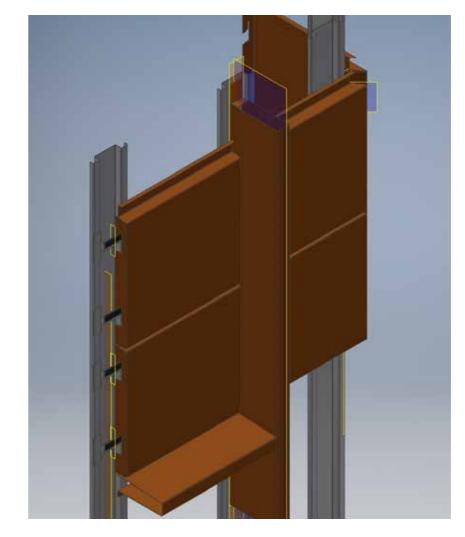

BIM objects

One of the benefits of using Ruukki's established cladding products is that they come with design tools. The products have been modelled into both Revit and ArchiCAD objects. The most typical details are available for AutoCAD. Using the design tools is one way of assuring a smooth project flow.

Design support

Ruukki's experienced designers can also help in developing project specific details, and show how interface details work between standard and bespoke details. We are available to offer support at pre-specification stage to assist in developing details and specifications that offer a degree of cost certainty from an early stage.

Quality

Read more: www.ruukki.no

The quality of a product depends on several factors. Materials and coatings has to withstand the environmental conditions. The product also has to be simple and safe to install. Last but not least, the production procedures and the workmanship of each individual part manufactured has to be perfect with low levels of tolerances.

Ruukki's products are produced with fully automated production lines to ensure consistent quality. This together with high quality materials enables us to provide up to a 50 year warranty, according to the terms and conditions in Ruukki's product warranty. All Ruukki's facade cladding products are CE-marked according to relevant EN standards.

Vi lager stålbaserte produkter til vegger og tak, for både næringsbygg og boliger. Vi er en leverandør av produkter, systemer og løsninger av høy kvalitet, utviklet bærekraftig og for å leve opp til de høyeste kravene til holdbarhet under tøffe forhold.
