

Siba.
Durability
and perfection

Rainwater systems

Water is the source of life.
Its strength inspires respect in us.
Water changes its state and
activity throughout the year.
Sometimes it is dangerous.
We do not want to fight against
it, but consciously work with it.

We have been developing
more and more technically
and aesthetically advanced
systems for many years,
which is no coincidence.

The highest quality Swedish steel

with modern GreenCoat RWS
Pro coating

We manufacture Siba rainwater systems using the highest quality Scandinavian steel, considered worldwide as one of the best materials available on the market. This steel is 100% recyclable without loss of quality, has low weight and is easy to machine. Compared to other metals, it has some of the best thermal expansion parameters. This means products made from this raw

material are more durable and maintain a uniform appearance.

Siba gutters made of Scandinavian steel are protected by a double-sided Green-Coat RWS Pro coating, which is characterised by perfect gloss and colour fastness. Thanks to the use of polymer particles, the surface is scratch-resistant and ensures optimum resistance to environmental effects.

The protective properties of the coating guarantee effective protection against corrosion and loss of colour or gloss.

The Green-Coat RWS Pro coating is characterised by high flexibility, thanks to which sheets with this coating can be bent easily without risk of damage to the finish.

Siba rainwater systems

Thoughtful and elegant solution for all types of roofs

Rainwater systems are designed to drain rainwater and melted snow from the roof, while ensuring a suitable building appearance.

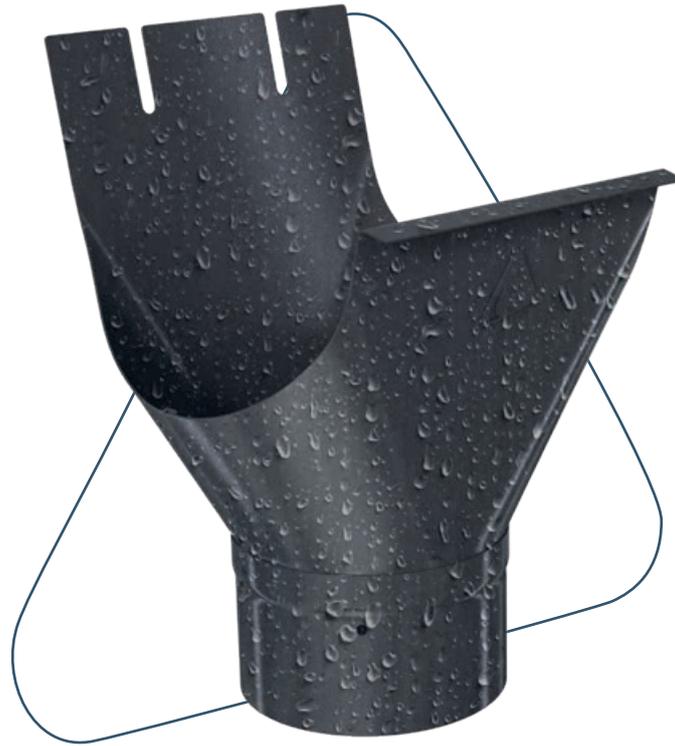

Siba roof rainwater systems are ideal in combination with all types of roof coverings, including: steel, fired or concrete roofing.

Siba is a complete system that includes all the necessary elements to create an ideal rainwater drainage system.

Offered products include gutters, downspouts, hooks and accessories in many colours and sizes.

Choose your own project from the Siba Round, square Siba Square, or hidden Siba Modern product lines.

Siba Round

→ semicircular rainwater system

Perfect harmony between aesthetics and functionality

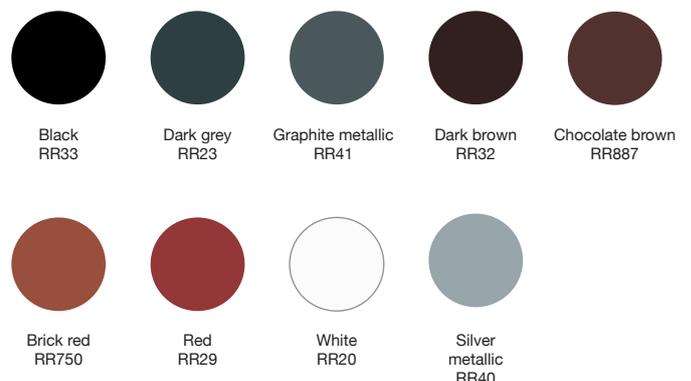

Siba Round rainwater systems are suitable for both family houses and low-rise and tall apartment buildings. With a rich selection of colours and elements

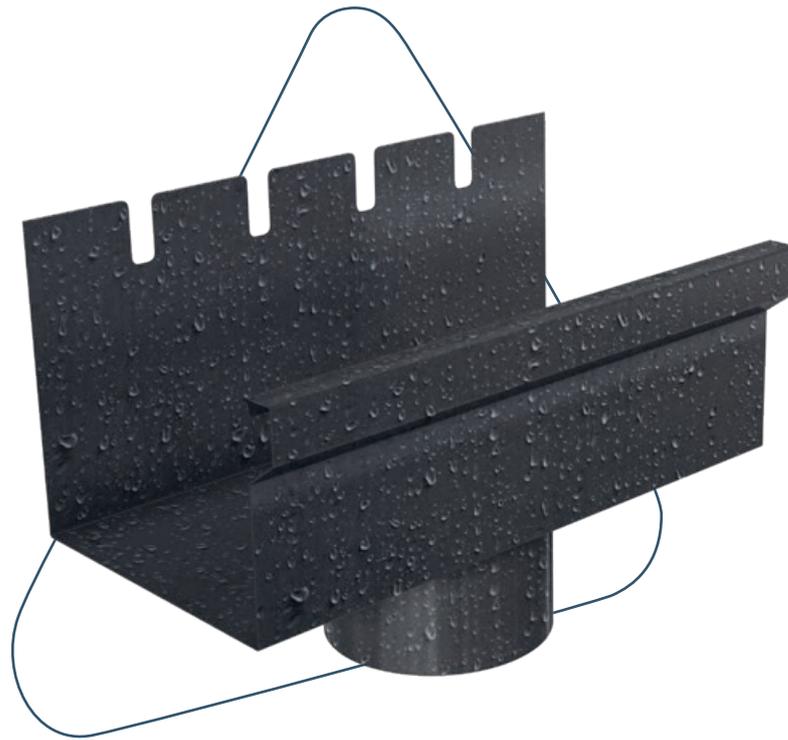

they are perfect for every roof. The high quality of the material guarantees the accuracy of the design and prolongs service life.

Technical details

Length	2000 4000 mm 6000 mm
Downpipe length	1000 3000 4000 mm
Gutter diameter	125 150 mm
Downpipe diameter	90 100 120 mm
Steel thickness	0,6 mm
Gutter weight	1,1-1,4 kg/m
Downpipe weight	1,2-1,9 kg/m
Coating	GreenCoat RWS Pro
Warranty	30 years

Colours

Siba Square

→ square rainwater system

For contrast or interplay with the architecture of the building

The Siba Square rainwater system is a response to current trends in architecture. The square gutters give the façade a completely new look, which is why they are widely used by designers.

Siba Square offers contrast or contrast of form with the façade of the building. The system is available in the three most frequently chosen colours: black, dark grey and silver metallic.

Siba Modern

→ hidden rainwater system

Modern and hidden building protection solution

The Siba Modern hidden rainwater system is intended for use on buildings where the gutter is integrated into the shape of the façade. It allows safe concealment of gutters inside the façade and gutters under aesthetic cover panels.

Cover panels are available in two variants of durable finishes and also in four colours - anthracite, graphite, black and grey. The cover panels are mounted on special rails along their entire length and together ensure increased wind resistance and increase the strength of the entire system.

Technical details

Length	4000 2000 mm
PVC drain	1000 3000 mm
Gutter diameter	150 mm
Drain diameter	110 mm
Steel thickness	0,6 mm
Gutter weight	1,4 kg/m
