Renovation of the car showroom and workshop included some major changes. The building was given a more impressive look by raising the façade height by two metres and using perforated steel profiles in the cladding. Backlighting was installed in the profiles for added impressiveness. With a length of 130 metres, Autoverkkokauppa.fi's façade is the longest LED light-controlled façade in Finland. Ruukki delivered around 2000 square metres of Ruukki's Design Tokyo S18 façade profiles.
