

Azipod

The load-bearing frame delivered and installed by Ruukki is made completely of steel.

A new office building and production hall were built for the production, product development and structural design of ABB's Azipod azimuth thruster systems in Vuosaari, Helsinki.

The factory comprises a four-story office building, production hall and reception area. The tallest point of the building is at 30 metres, and the main measurements of the assembly factory are 81 x 64 metres.

The load-bearing frame delivered and installed by Ruukki is made completely of steel.
