

## Dirigere office building in Trinec, Czech republic

Ruukki delivered custom-made, front-to-back tilted Ruukki Liberta® rainscreen panels from GreenCoat® color coated steel to adorn the façade of the new, prestigious headquarters of DIRIGERE SERVIS s.r.o. in Třinec. These cassettes create an impressive visual effect on the façade and introduce new creative dimensions and approaches to designing modern cladding.

- > Year: 2022 - 2023

DIRIGERE SERVIS s.r.o. is a construction company but also steel structures manufacturer. Since October 2019, the company owns the industrial area in Třinec, where it operates the Center for Steel Structures. In 2021, Dirigere initiated the revitalization of the area. The aim was to create better conditions for employees and to have a representative company headquarters. The renovation took place in two stages and on the tenth anniversary of the DIRIGERE SERVIS s.r.o. foundation, the new company headquarters were ceremoniously opened in the summer of 2023. For the façade of the administrative building Ruukki delivered unique, custom-made, front-to-back tilted Ruukki Liberta® panels.

In this building we have used GreenCoat® - A Nordic quality sustainable steel from SSAB.
