

Erik Tiberg Fastigheter – Office building, Sweden

When Erik Tiberg Fastigheter decided to renovate and expand their property in West Gothenburg, Sweden, they chose Ruukki rainscreen panels as the façade cladding solution. The perfect alignment of the matte black Ruukki Liberta® Elegant 500 panels makes for an elegant and eye-catching look.

MIO, a revered, long-established and much-frequented furniture store just outside Gothenburg, was renovated to better serve both tenants and visitors alike. In order to expand the business, the 13,700 square meter building underwent a complete makeover, in which the premises were renovated and expanded by 6,500 square meters. In addition, the property was supplemented with a new five-story office building. The refurbished building now has a fresh, innovative look as well as a host of new features such as a brand new entrance, escalator, gym and meeting room with stunning views.

The renovation was designed by Thorbjörnsson + Edgren Arkitekter. Every detail of the façade was designed from the very beginning so that the windows, doors and matte black Ruukki Liberta® rainscreen panels are a perfect match. Close cooperation between the architects, Ruukki's experts and the tinsmith enabled the eye-catching and highly detailed solution.

Color: GreenCoat HIARC matt RR33

In this building we have used GreenCoat® - A Nordic quality sustainable steel from SSAB.
