Built using conventional methods, the factory's south-facing facade dated from the 1970s. The company wanted to improve its employees' working conditions and increase the facility's energy efficiency. In the connection with the modernization project, the company also wanted to make the access route used by visitors safer. New windows were built and the interior walls were given a white surface to make the work environment lighter and pleasanter. This renovation work was carried out as part of a more extensive development project in the factory area.
