Main contractor: Viilhall OÜ
Year: 2019

The office and production building of the stainless steel, aluminium and black metal structure manufacturer Ferresto Laser has been built using Ruukki's wall and roof panels. The panels were installed onto the roof and sides of the end wall niche as well. The beautiful colour scheme and the properly placed additional steel sheets give the building a polished look. In addition to the precision and neatness, Ferresto also appreciates the beautiful result achieved using Ruukki's materials.
