Partners

Architect: Arhitex OÜ
Main contractor: Tartu Ehitus AS
Installation company: Tartu Katuseehitus OÜ
Year: 2017

The project was thoroughly discussed with an architect. The specific vision and the products and solutions chosen resulted in a building that stands out from the other buildings in the area. The colour palette was chosen in collaboration with the customer. This project is a good example of achieving a great result using a single manufacturer's products. Ruukki sandwich and Liberta rain-screen panels and Tokyo S18 design profiles were used in the building.
