

## K-Citymarket Sastamala

The project was done using our energy panel system because it was important for the developer to be able to prove airtightness. Our system package includes airtightness measuring and guarantee for the project. It reached better tightness than what was required and promised. Over the years, we have delivered several energy panel projects for Kesko.

## Partners

- > Architect: BST-arkkitehdit Oy
- > Main contractor: Hartela Oy

K-Citymarket forms a center that also hosts the services of a pizza parlor, lunch cafeteria, pharmacy, jewelry, hair salon and a clothing store. The center encompasses about 8,400 m<sup>2</sup> in total. Kesko values focus on sustainable development and CSR, and this focus also applies to its construction projects. The Sastamala project has been designed to be highly energy efficient. The developer required extremely high airtightness ( $q_{50} = 0.9$  or less). Thanks to airtightness, heating costs and CO<sub>2</sub> emissions are lower.

The project was done using our energy panel system because it was important for the developer to be able to prove airtightness. Our system package includes airtightness measuring and guarantee for the project. It reached better tightness than what was required and promised. Over the years, we have delivered several energy panel projects for Kesko.

This project was designed by BST-arkkitehdit Oy of Tampere, Finland. Main contractor was Hartela Tampere Oy.
