

## Kilo health centre

Ruukki's steel-based external wall elements, which feature graphical patterns for optical effect, were selected for the building's facade surface.

Ruukki's steel-based external wall elements, which feature graphical patterns for optical effect, were selected for the building's facade surface. The patterns enabled the creation of an expressive-looking facade cost-effectively.

The long facades consist of identical, one-story-tall steel frame elements. Each element is 7 metres in width and contains three window openings.

The facade's graphical effect was enhanced even further by adding the white steel sheets.
