

KV Triangeln - Residential building in Sweden

Steel and especially design profile is really interesting material because you can achieve homogeneous look without visible joints.

The horizon was important when designing the building and the view from the apartments due to the location, all of the apartments has view in two points of the compass or “two directions” if you like. Due to the horizon, everything is on a horizontal level and also important to create homogeneous buildings. To achieve this (horizontal and homogeneous look) the S10 is in a horizontal direction, goes from wall over to balcony without visible joints and the flashing between floors boost that impression the horizontal look.
