- Developer and main contractor: Lemminkäinen Talo Oy Kaakkois-Suomi
- Architectural designer: Arc Designers

Located in the Moreeni industrial park in the city of Hämeenlinna, MegaHub Logistics Center combines a freight terminal and a warehouse.

The terminal building, with a surface area of approximately 2,000 square metres was completed first, and it has now been complemented with a 15,400-square-metre warehouse building.

Ruukki's delivery for the first and second phase of the project comprised a quick-to-build, modifiable **steel frame, sandwich panel elements** for the facades, and **load-bearing profiled sheets**.

The steel frame was fire protected according to Ruukki's certificate from the VTT Technical Research Centre of Finland. The protection method utilises the building's fire sprinkler system, helping the customer avoid extra expenses related to fire protection.
