

Novapolis commercial building in Tartu, Estonia

Novapolis is a commercial building in Tartu with modern facilities and an excellent location. The Institute of Physics of the University of Tartu was located in the historic building for many years before the Novapolis commercial building, and now the building has been fully renovated and is filled with office space. Ruukki supplied 520 m² of Liberta Original 102 perforated and powder coated rainscreen panels to the site, together with battens and fastenings.

The larger panels were produced from 1.5 mm thick steel, while the smaller ones were produced from standard 1.2 mm thick steel available in stock.

In this building we have used GreenCoat® - A Nordic quality sustainable steel from SSAB.
