

Tändstickan 3 - Office building in Sweden

Located in Gothenburg, Tändstickan 3 is a 12-storey office building. Ruukki supplied Liberta 550 rainscreen panels, some of which are perforated, for the project. In addition, the company delivered a customised support and fastening system for the Liberta 550 rainscreen panels.

Håkan Nässén, a technical building manager at the Kungsleden property company, which owns the building, explains that Tändstickan 3 was built to meet the increased demand for office space in the Gothenburg region.

‘In the design of the building, the starting point was to create a building that blends in perfectly with the two existing buildings, forming a harmonious entity with them. We are happy with the building and have received plenty of positive feedback on it. The office buildings have introduced new life to the industrial site,’ says Håkan Nässén.

In addition to good, functional space solutions, Tändstickan 3 boasts excellent environmental qualities. Because of this, it has been awarded LEED Gold environmental certification.
