

## Ogre engineering communication office in Latvia

We delivered mixed Ruukki standard color RR45 GreenCoat® HIARC MATT elements with accent elements in red color on the face. HIARC MATT color gives nice background for accents.

This facade renovation project is an excellent example of how Ruukki facade cladding materials can be used to improve the visual and technical condition of a building. Quality is essential in a construction project at all stages, from the construction design and the correct choice of materials, to the quality of the installation process. The facade cladding is made of Ruukki Liberta Original 102 cassettes with GreenCoat® Hiarc Matt coating, highlighting certain parts of the facade with powder coated cassettes in bright colours. This combination resulted into a great result and is a good example of how building facades can be renovated using our facade cladding products.

In this building we have used GreenCoat® - A Nordic quality sustainable steel from SSAB.
