

## Okmetic Oyj

Okmetic Oyj's production facility in Vantaa was finalised in April 2013. It is a great example of Ruukki's energy-efficient solutions. The aims of the developer were energy-efficiency and airtightness in particular.

## Partners

- > Developer: Okmetic Oyj
- > Contractor: Rakennus Auridos Oy
- > Architectural design: HMT – Arkkitehdit Oy

- Okmetic Oyj's production facility in Vantaa was finalised in April 2013. It is a great example of Ruukki's energy-efficient solutions. The aims of the developer were energy-efficiency and airtightness in particular.
- The production process taking place in the facility requires an airtight environment. The airpressure in the building is positive which helps keep out external particles (e.g. dust, harmful agents). Ruukki's airtight energy panel was used in order to secure airtightness in the building.
