

# Osuuspankki bank

Ruukki supplied the copper façade for the bank building. Ruukki Emotion façade system, which includes a perforated copper profile with lighting effects, was installed in the ceiling of the entrance to the bank. Ruukki Emotion has also been used in the banking hall inside.

Ruukki delivered the copper, bronze-coloured façade for the renovated bank building. Copper design profiles were also used for the cladding of the machine room on top of the roof of the building.

In the bank hall, LED lights have been placed behind a light perforated steel profile to create a sense of space and light, and to brighten up this almost windowless area.
