

Production facilities, Nowel, Poland

Nowel Sp. z o.o., a family-owned company with a long-standing tradition and a producer of baked goods, is continuously growing, increasing its sales and entering new export markets. In 2023–2024, a new production facility was built, for which Ruukki supplied 27,600 m² of PIR core panels and 5,500 m² of mineral wool core panels. The cooperation between Ruukki and Nowel began much earlier, and Ruukki's sandwich panels were also used as the envelope of other company facilities.

Partners

- Client: Nowel Sp. z o.o.
- General contractor: Cech-Bud
- Year: 2023-2024

Nowel cooperates with the largest retail chains in Poland and across Europe. Every day, 144 tons of baked goods are produced, and every 30 minutes a truck filled with bread leaves the company's facilities. The company invests in modern production lines and infrastructure, which ensure high product quality under food-safe conditions. Ruukki's sandwich panels, thanks to their high airtightness, fire safety, and aesthetic qualities, are a proven solution that Nowel chooses for its production plants. An important advantage is the ability to select the appropriate coating – from standard to PVC or INOX – depending on the technical requirements of the project.
