

Research and Development Center, Poland

Fabryka Zieleni SA (former Fosfan) chose Ruukki Forma® facade system for their new Research and Development Center in Szczecin, Poland. Ruukki provided sandwich panels, including corner Design Panels and Liberta original 102 Grande rainscreen panels for a modern and technically advanced façade. Additionally, in the arcade, Liberta original 102 panels were used. This multidimensional solution required a close cooperation between Ruukki and the architect due to the use of tailor-made elements, such as corner panels and tilted details. A minimalistic in its form, well designed building, with eye-catching details, has a total usable area of 1200 m² and is a home of a modern laboratory, as well as office and conference facilities.
