

Rhenus logistics center

“Sandwich panels are particularly suitable for industrial construction. The grey matt coating gives the building a coherent and solid look. Cladding lamellas brought details to the façade, nuances that prevent it from looking like a long, flat and dreary surface,”

Rhenus Logistics is an international logistics company. Its new premises in Lithuania, some 8 kilometres southwest of Vilnius, were completed in winter 2017.

The walls of the logistics centre and office building were built using sandwich panels made by Ruukki and the façade of the office building was clad using Ruukki cladding lamellas.

“Sandwich panels are particularly suitable for industrial construction. The grey matt coating gives the building a coherent and solid look. Cladding lamellas brought details to the façade, nuances that prevent it from looking like a long, flat and dreary surface,”

“Ruukki’s products are top quality and make for practical implementation and design. Another advantage is that they can be used to build quickly.” says architect Ignė Grigaliunaite.
