The Ruukki® Patina sandwich panel looks natural and elegant in our Ruukki Express point of sales building in Finland. Its steel surface brings timelessness to the building in addition to top-class properties. The Cor-Ten® steel used in the product is a natural material and can be recycled at the end of the panel's use phase. It also has couple of unique features: Firstly, if the Ruukki® Patina panel is scratched, it will repair itself over time. Secondly, the panel has a patented joint structure preventing corrosion at the joints. In addition to the patina panels, a wide selection of individual Ruukki facade cladding products has been installed on some of the facades for presentation purposes
