- > Contractor: Nordec (former Ruukki Building Systems)

Terrafame is currently constructing one of the world's largest battery chemicals production lines, which will move the company ahead in the metal refinery chain from a manufacturer of intermediate metal products to a producer of battery-grade chemicals used in electric vehicle batteries.

Terrafame is a Finnish multi-metal company founded in 2015. Its mine and production plants are located in Sotkamo. The company's bioleaching-based production process is unique and it has a much lower carbon footprint than conventional nickel production technologies.
