

K-rauta Store Lahti

The Lahti K-rauta is a prime example of an energy-efficient commercial building.

The Lahti K-rauta is a prime example of an energy-efficient commercial building. The Kesko Group is committed to ecological efficiency and has signed an energy efficiency agreement for retail trade. Despite the strict energy efficiency criteria imposed, the premises are welcoming, well-lit and well ventilated.

K-rauta in Lahti, which has a floor area of 8 382 m², was completed in 2008 and is one of Kesko's stores with improved energy efficiency. A well-functioning system consisting of, among other things, good thermal insulation and heat recovery in the ventilation process plays a major part in the energy efficiency. Ruukki's frame, wall and roof structures helped to achieve the result and they substantially save in heating costs.
