- Talvivaara Mining Company

Talvivaara Mining Company aims to be an internationally significant base metal producer, focusing primarily on the production of nickel and zinc at the Sotkamo mine. Ruukki delivered steel frames and wall structures for the Talvivaara mine, some fully installed and others as product deliveries. Steel frames and crane tracks were delivered for the repair facility and the wash hall for mining equipment. The second contribution comprised the delivery of frames and crane tracks for the facilities for limestone handling, burnt lime warehousing and crushed limestone warehousing.

Sandwich panels, widely used in industrial construction, and necessary fasteners, gaskets and accessories were delivered for the outer wall and partition wall structures of the filtering, thickening, repair and control facilities.
