

Armila – Office and logistics building

Ruukki supplied the energy panels for the walls of the building and the load-bearing roof structures. Povilas Korsakas, director of Construction One, which was responsible for the building's design and construction, says that Ruukki panels and load-bearing structures lent themselves to the purpose and complied with tough criteria.

- Builder: Construction One

Armila, a Lithuanian distributor of pharmaceuticals and healthcare products, moved into new office and pharmaceutical warehouse premises in late 2018. Armila needed more space to be able to grow our existing business and to expand activities into a new service. The new building is home to the head office and a logistics centre.

Ruukki supplied the energy panels for the walls of the building and the load-bearing roof structures. Povilas Korsakas, director of Construction One, which was responsible for the building's design and construction, says that Ruukki panels and load-bearing structures lent themselves to the purpose and complied with tough criteria.

“Ruukki’s products enabled us to meet the energy performance requirement. They also enable a steady temperature inside the building, are support structures and meet fire safety requirements,” he adds.

“Ruukki’s success comes down to the combination of good products and good service,” says Armila’s CEO Remigijus Mielinis.
