

Public building – Majåkerskolan school

Ruukki supplied Liberta Cor-Ten 600 rainscreen panels and substructure for a façade for a new building. “The building façade features fine contrasts. Cor-Ten brings warmth, the brick sections coolness and the metal sections a dark surface. Majåkerskolan is a great success story and I’m delighted with the outcome,” says architect Sofia Lilja at Linkarkitektur.

Completed in 2017 in Lidköping, Sweden, Majåkerskolan school is where pupils can complete the first six years of their education. Besides classrooms, it has a dining room and its own kitchen, school healthcare facilities, and a sports hall with changing rooms. The school boasts a pleasant, creative and flexible learning environment that motivates pupils to take new approaches to thinking and doing.
