

Office and warehouse, Leszno, Poland

New premises of a transportation company from Leszno, Poland, consist of a warehouse and an office part. The façade of the office part is clad with Ruukki® Primo panels and is the first building in Poland to have our premium Ruukki® Primo system on the walls.

In the first stage of this project implemented in 2019-2020, Ruukki delivered wall sandwich panels SP2B E-PIR and roof sandwich panels SP2C E-PIR, together with flashings, a rainwater system, sealings and joints for a new warehouse.

The second stage involved an office part and its development started exactly at the same time as Ruukki introduced its new Ruukki® Primo cladding system for the premium segment.

“We were able to convince the investor to go for it. I think there were a few factors that helped us – our experience in cladding products, their quality and also the novelty value, as Primo is an attractive newcomer to our offering,” says Rafał Bejster, Area Sales Manager, Ruukki Polska.

Our customer eventually chose Primo Skyline 150 for the entire office building adjacent to the warehouse. Ruukki’s delivery included standard and corner panels and all required accessories. The products were delivered in April 2020 and installed in summer 2020.
