

Corona shopping centre

Ease of shopping and good transport connections were the basis for the planning of this shopping centre.

Ease of shopping and good transport connections were the basis for the planning of this shopping centre. Coordinating all parts of the project such as design, planning the tasks for execution and timetabling - were a demanding task, but thanks to the excellent collaboration between all parties the project was finished as scheduled.

The frame of the shopping centre was built using steel concrete columns, and the upper level structures are trusses with load-bearing profiles.
